Assignment 0501 Feedback

Marc A. Mouallem

MarcMouallem / me@marcmouallem.com

1a — One can never issue too many commands :) (+)

1b — You transcribed your activity accurately and completely. (+)

2e — You performed some degree of byte-level navigation, but there are enough gaps and inconsistencies in your report to cast doubt on how much you truly understood this. In some cases, it is easy to just jump to conclusions because a data block has recognizable data, without knowing how to determine that data block based on directory and inode information. Thus, it is important to explicitly state the latter in order to show that you did not rely on the former. (/)

4d — You were able to use the information presented to a degree, but assorted gaps in your bit-level navigation show that you didn't use that information in full. (|)

4e — Commit frequency and comments are appropriate for the work done. (+)

4f — Submitted a little under two years after original due date. (−)
