Assignment 0206 Feedback

Proficiencies for *1a* and *1b* still only go as high as | in this assignment due to our still being in the early going with respect to these outcomes. The next assignments with these proficiencies will be expansive enough to merit a + maximum.

Marc A. Mouallem

MarcMouallem / me@marcmouallem.com

(gymnastics work has not changed, so its proficiencies are “converted” to the current outcomes directly from the previous evaluation; CSI:OS is new, so that is freshly evaluated.

1a — You worked with processes and memory usage well with a slight case of TMI (i.e., commands could have been filtered better to provide the requested information more precisely), but for files you did not use the right commands for determining disk usage nor mounted volumes, and you missed one last step in the inode exercise, thus omitting one of the main points that this was meant to make. (/)

1b — You showed good proficiency with managing I/O across the board. Your screenshots of screen show its use thanks to the window title, but still it would also have been good for you to show the commands that you used. (|)

1c — You have shown that you have no problems interacting with computers through normal ssh, but are missing the tunneling exercise. (/)

3a — You generally found appropriate evidence for Ubuntu and Windows. There are some slight misses as stated in the inline feedback, but not so huge as to hit the proficiency. What does hit you is missing one of the three platforms entirely. You could have come to the Keck lab for the Mac stuff. (/)

4d — You generally did a good job with looking up necessary information, although some of that was hampered either by a misunderstanding of the assignment question, or misunderstanding what some commands showed you (du and removable media exercises). (|)

4e — (previous evaluation, for gymnastics work:) You had a single commit, which is marginally acceptable given the nature of the assignment. Your commit message could have been better though. (updated evaluation, for CSI: OS work:) Your CSI:OS commit frequency and messages are appropriate for the work that was done. (+) (combined proficiency)

4f — “Gymnastics” assignments submitted on time, even “early,” except for the tunneling exercise. CSI:OS came a couple of days later after clarification was made that this was now grouped with gymnastics. (|)
