Assignment 0220 Feedback

The proficiency for *2d* only goes as high as **|** in this assignment due because this is just the first of your operating system implementation assignments. The next assignments with this proficiency will be expansive enough to merit a **+** maximum.

Marc A. Mouallem   *MarcMouallem / me@marcmouallem.com*

2d — You invoked the system calls successfully, certainly. Hard to say that they can credibly substitute for existing commands though, because they do nothing else, have no help or error handling, and (primarily) they don't communicate their result in the same way that the "real" commands do (i.e., errors are not returned in the same way that standard commands do). Still, you called them and called them correctly. (**|**)

4a — Very little code to write here, and very little to mess up. Functions as intended, although as mentioned in *2d* the functionality itself could have been better. (**|**)

4b — Not much to examine here in terms of separation of concerns; instead, we look at how your programs would work as commands in an operating system—and as pointed out above, the returning of result codes is nonstandard. (**|**)

4c — With so little code to write, it better be readable—and it is. (**+**)

4d — You did your due diligence here in looking up system calls you can use then calling them correctly. (**+**)

4e — Commit frequency and messages are appropriate for the work done. (**+**)

4f — Submitted one day late. (**|**)
